DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-25, drawn to a chassis, classified in class 361, subclass 686.
- II. Claim 26-30, drawn to a method of assembling a chassis, classified in class 29, subclass 592.1.
- III. Claims 31-33, drawn to an extruded bar, classified in class 174, subclass 52.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I, III are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the product can be made by a different process, in particular the first and second covers need not be captured in a slot formed in each of the chassis structures, instead they can be placed on top of the slot structure and fastened or fastened to the edges without the need of the slots. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the

Art Unit: 2841

subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the elongated members or extruded bars need not be of uniform cross section to fulfill the same function. The subcombination has separate utility such as being used as a backplane storage unit.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II or Group III, restriction for examination purposes as indicated is proper.
